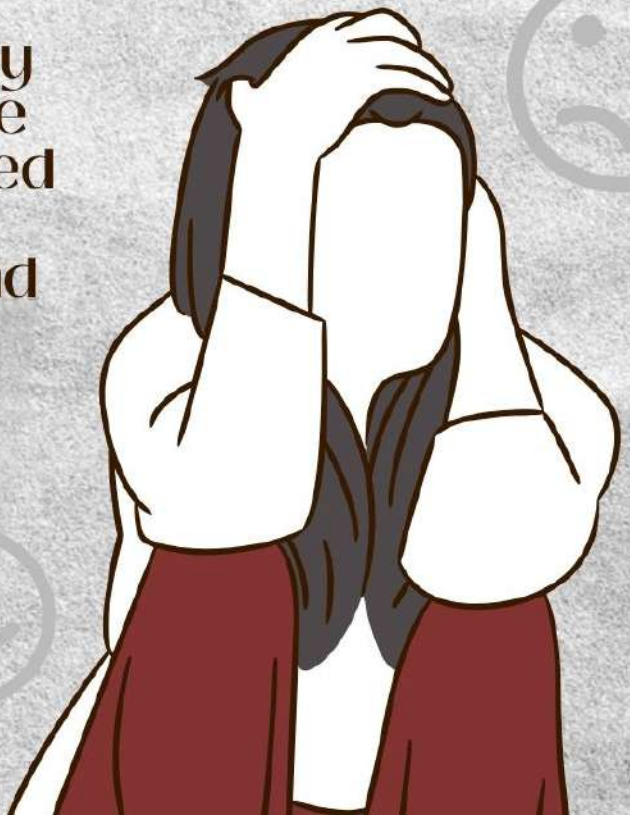
Final Presentation by
Angelyn Gonzalez

Analyzing My Library program:

As I begun to review my library program using the sustainable library rubric and was saddened to see how ill equipped the library was. I felt dismayed and so far behind.



What Should I Do?

My vision is a library where students can indulge in their own intellectual curiosities and then create presentations in different forms to share with the school community. I want to open up the library to community members who can share their knowledge and guidance.

I had to really think about my vision and what i needed to make it work

THE CLEAR VISION

Bring in the Community

The main goal is for students to start building their interest by being inspired by community members and their own research. They would then transform that information into different multimedia presentations.

Main Goal Established

My main goal is to attain a media cart for the library because it is the easiest way to increase access to materials, the community and also to create media fluency and creativity.

ASKING FOR HELP

Reaching out to the comminity and anyone I could. Writing grants, posts and doing all I could think of

A MEDIA CART IS SECURED!

YAY!

SWEET VICTORY

WooHoo!

PODCASTING MATERIALS ARE SECURED!
